

AZVURAL

MACHINERY & KNIFE IND. TRADE LTD. CO.

Our operations as a business began in 1902, but knifemaking is actually a family profession, passed down from generation to generation, the exact origins of which are unknown.

The secret to our long-standing presence in the industry is our uncompromising commitment to quality and customer satisfaction.

We are able to meet evolving customer demands by simultaneously monitoring developing technologies.

Ensuring and maintaining high service and product quality, quickly meeting customer demands, and providing our customers with the most appropriate solutions that meet their specific needs are the fundamental principles that guide our work.

We manufacture in our own factory.

We are proud to export products bearing our brand to 41 countries worldwide.

Azvural Machinery and Knife Industry Trade Ltd. Co.

ZIRK MACHINE

It is specially designed to meet the needs of small and medium-sized restaurants, hospitals, hotels, dining halls, schools, dormitories, restaurants and other industrial kitchens to process materials such as meat and vegetables.

of different sizes with its model that has a maximum processing capacity of 5 kg of meat and 10 kg of vegetables.

- The Zirk machine is used to quickly and homogeneously chop materials such as boneless meat and vegetables.
- The zirk machine and its boiler have a stainless body with 304 quality chrome mirror features of German origin.
- The boiler has a transparent, plexiglass lid with a magnetic relay locking mechanism. It has a maximum capacity of 5 kg meat / 10 kg vegetables.
- There are 2 stainless steel knives in the pot
- The control of the Azvural Zirk machine is done via the panel located on the upper back section.

POWER: 380 V 50 Hz

MOTOR POWER: 1,5 KW / 2 HP

DIMENSIONS / WEIGHT: 40*50*90 cm / 70 kg

USE & CARE & SAFETY

- When starting the machine for the first time, clean the blade and pot thoroughly with a wet cloth and dry them.
- Do not operate the machine idle.
- Do not load the material much below the capacity of the machine.
- The device is made for industrial use and should only be used by personnel who have received training on the device.
- Place the product on a flat and solid surface.
- While the lid of the machine is open, after loading the material you want to chop into the material chamber, close the lid and ensure that the lid latch is locked.
- Ensure that the cutting blade of the machine easily passes through the channels on the blade onto the shaft.
- Since the lid of the machine has a sensor, your machine will not operate when the lid is open for safety reasons.
- After the material chopping process is finished, unplug the machine from the socket it is plugged into in order to avoid accidents.
- Never touch or put your hand into the blades, which are the moving parts of the machine, while the machine
 is operating.
- Do not open the lid while the machine is operating.
- The machine may stop in case of voltage drop or overload. In these cases, incorrect use of your machine will damage the device and shorten the life of the device.
- If you need to change the machine blade, make sure that the blade is fully seated in its slot during the installation of the blade and that the nut on the blade is tightened well.
- Before starting the machine, ensure that the bowl cover is turned and placed in its slot, otherwise the machine will not work since the cover has a sensor.
- Make sure that there are no hard substances (metal or bone pieces, etc.) in the materials to be ground.
- You can put a maximum of 5 kg of boneless meat or 10 kg of vegetables into the machine's boiler at a time.
- Do not leave the plug plugged in after the material chopping process is completed.
- Perform periodic cleaning of the machine every 15 days.
- Clean the outer surface of the machine, the bowl and the cutting blades with a wet cloth and dry them.
- You can use chrome cleaner during cleaning.
- Do not clean the pot rubber with warm water after each use and dry it, and be careful not to stretch the rubber during this process.
- Do not use materials that will scratch the chrome sheet such as steel wool during cleaning.
- It should not be cleaned with pressurized water. Be careful not to let water get into the pot during cleaning and grinding, otherwise you may cause the motor to take in water and burn the motor.
- Do not use acid or acid-derived materials when cleaning the machine. Otherwise, the structure of the chrome sheet will be damaged and rust will be seen.
- Be careful not to let the electrical installation come into contact with water during use and cleaning.

ZIRK MACHINE USAGE INSTRUCTIONS (TYPE A)

- After trimming the sinews from the meat, let it rest in the refrigerator or cold storage for 4 to 5 hours.
- If this duration is too long, you can keep the meat in the deep freezer for 30 minutes instead.
- If the meat still contains sinew and cannot be completely cleaned, you can freeze it to a medium firmness in the deep freezer and then grind it.
- When grinding meat for Urfa, Adana, döner, or köfte, to prevent the meat and fat from appearing different in color, place the meat into the machine in walnut-sized pieces.
- When grinding meat for Adana, Urfa, or döner, do not operate the machine for more than 10 seconds. The coarseness of the grind is determined by the user.
- For lahmacun filling, first put parsley into the bowl, then the meat.
- Maximum single-batch capacity for Adana, Urfa, and döner meat is 4.5–5 kg.
- Lahmacun pepper is ground separately (single-batch capacity: 10 kg).
- Lahmacun tomato is ground separately (single-batch capacity: 10 kg).
- Lahmacun ingredients can also be ground together if desired, as long as the bowl capacity is not exceeded.
- All ingredients for ezme salad can be ground together. Capacity: 10 kg.
- Single-batch capacity for çiğ köfte is 3 kg.
- Single-batch capacity for cutting kadayıf is 1 kg.
- Single-batch capacity for hummus is 5 kg.
- DO NOT use for İçli Köfte dough!
- DO NOT use for Yuvalama dough!
